

1133. Largest Unique Number

Premium

Solved ●

Easy Topics Companies Hint

Given an integer array `nums`, return *the largest integer that only occurs once*. If no integer occurs once, return `-1`.

Example 1:

Input: `nums = [5,7,3,9,4,9,8,3,1]`

Output: `8`

Explanation: The maximum integer in the array is 9 but it is repeated. The number 8 occurs only once, so it is the answer.

Example 2:

Input: `nums = [9,9,8,8]`

Output: `-1`

Explanation: There is no number that occurs only once.

Constraints:

- `1 <= nums.length <= 2000`
- `0 <= nums[i] <= 1000`
